Celebrating the 2018 Flagstaff Festival of Science

FORT TUTHILL FOREST HEALTH TOUR

Saturday, September 22
3-4:30 p.m. at Fort Tuthill County Park

Explore the Fort Tuthill Thinning Project, a 330-acre effort to increase forest health, improve public safety and reduce wildfire risk. Learn about the impacts of fire on forest ecosystems and what fire scars tell us. Meet at the forest resiliency interpretive sign north of the Fort Tuthill Bike Park, next to the NAU Ecological Restoration Institute's demonstration area.

Visit our "Forest Restoration Demonstration Site" located in the Park (see map). View the kiosk explaining the forest ecology and fire history of the area. You can also experience a forest that has been restored through removal of small trees to create a more open forest and compare it to a dense unhealthy forest stand that has not been restored.
